

Governmental Project

- Site:** “Harbor Town” – Wells on the Sea, England
- Task:** Protection against high tide with keeping the free view to the sea
- Specialty:** Permanent installation of water-pressure resistant glass, which replaces the non-permanent wooden planks
- RS-Solution:** Protecting the town entrance with automatic closing gate

Result:

Installation of about 100m special waterproofed glasses.

The old wooden structure was not permanent. It must be installed every time of flood warning at least several times a year → very costly!

The advantage of a permanent glass system saves a lot of money without disturbing the view.

Since then it has become more attractive for tourists.
